Sir:

Please amend the subject application as follows:

In the specification:

At pages 1 and 2 replace the paragraph starting on line 25 of page 1 and extending onto line 16 of page 2 with:

The design of synthetic ligands that read the information stored in the DNA double helix has been a long standing goal of chemistry. Cell-permeable small molecules which target predetermined DNA sequences are useful for the regulation of gene-expression. Oligodeoxynucleotides that recognize the major groove of double-helical DNA via triple-helix formation bind to a broad range of sequences with high affinity and specificity. Although
